

HORIZONTAL DOUBLE HEAD DRILL

12 MONTHS WARRANTY

There are two drilling spindles. When the glass is put onto the table, it is fixed pneumatically and lower spindle will rise up automatically to drill. Then the upper spindle will drill the top side of the glass and thus, the hole is drilled. The cooling water runs inside the core drill so that the cooling effect is directly acted onto the glass without any loss. Tapping or chamfering can be made on the hole for particularly purpose.

The spindle design is sophisticated such that it is strong for 24 hours running a day. The rigid and anti-corrosive spindle enables maintenance free.

SPECIFICATIONS

HORIZONTAL DOUBLE HEAD DRILL		
✓	Max Processing Size	2200 x 2700mm
✓	Drilling Diameter	5-200mm
✓	Glass Thickness	3-20mm
✓	Installed Power	2.45kw
✓	Weight	1200kg
✓	Product Code	PI200500
✓	Overall Dimension	2.2m x 2.7m x 1.7m
✓	Fully Automatic, Pneumatic Loading Table	
✓	Precise & Fast
